

## **RetroMania Test Build v1**

First of all a huge thanks from me for agreeing to test out my build.

Big thanks to Chrisb and his legendary Beast build, which RetroMania initially began as. A big thanks also goes out to Sports-Mania's Willow Wilo for the HD Sports link, and finally Franco and the Team at RetroBoxTv for an amazing emulation package.

**PLEASE NOTE, THAT THIS BUILD DOES NOT INCLUDE THE .APK FILE FOR THE EMULATOR.**

I've been advised that a second version of RetroBoxTv2 is in the works (which looks amazing) and subsequently they've requested that I do not include their apk within the RetroMania build. Out of respect for their amazing team and their hard work I'm happy to conform.

However...

If you would to use RetroBoxTv in your build, the APK is still currently available to download from their website [retroboxtv.com](http://retroboxtv.com).

So just download and install the apk file to your android device.

It's also worth noting that the servers for V1 will be closed when V2 is released (the paid version), which will be around Christmas time. Personally I have no issue in paying for this service as a well integrated, simple and fully functioning emulation program has never been achieved before.

Here's a sneak preview

<https://www.youtube.com/watch?v=JgGWzmvdZgY>

## **Instructions**

1. Perform a Fresh Start or clean install of Kodi
2. Download the zip file to your device or via USB (or FTP etc if it's to an android box without a USB port).
3. Open Kodi, go to system, addons, my addons, program addons, open USB/SD Card Wizard (Rat the bottom of the list) and select configure.

4. **Navigate to the folder containing the backup.zip, press ok, launch the application and hit restore.**
5. **When the process finishes, restart kodi and you should have be good to go.**
6. **For the apk files just install them as you normally would and they will automatically link into the Apps tab in the build.**

Please be aware, I am in no way able to control the addons as they have their own developers who I am not in contact with (except maybe sports-mania). So if you have problems with an add-on, and you've already tried to update / reinstall / clear cache etc, but it still isn't working.... then please just use another as there is nothing I can do to repair it.

### **FEEDBACK IS ESSENTIAL!**

Also this is my first build, so please be constructive in your response with any issues and I will do whatever I can to help you resolve any problems. The reason I've asked for your help is so that we can work together to make RetroMania as good as it can be. I'm open to any ideas and suggestions you may have, so please just fire them over to me on as a PM on Facebook.

### **CONTROLLER SETUP**

Please check online for details on how/if your device can perform this function.

If you're using an Xbox 360 controller with a fire TV then I'm happy to help, as this is how I have mine setup.

If you're using a mobile device you'll be able to use the touch screen controls.

**That's it... so get downloading and hopefully you'll enjoy RetroMania**

**ENJOY AND LET ME KNOW IF YOU HAVE ANY ISSUES OR SUGGESTIONS ON HOW WE CAN IMPROVE IT.**

**THANK YOU ☺**
